PROFILE

I am a web developer who is looking for new job opportunity to gain more experience. Strong problem-solving skills with a keen eye for design and user experience. Experienced in working with cross-functional teams, version control systems like Git and agile development methodologies.

WORK EXPERIENCE

- Crowdsourcing Technologies Pvt. Ltd** June 2022 - May 2023
(thesqua.re - service apartments)

Software Developer Trainee

Company Overview : TheSqua.re Serviced Apartments is a global network of accommodation providing corporate and leisure travelers with premium stays across the globe. With an award winning portfolio of over 500, 000 apartments in over 1000 cities worldwide. Using Thesqua.re Service Apartments apps cooperate, and travelers can book service apartments in London, New York, Paris, Singapore, Tokyo, Dubai and many other top destinations.

- Successfully migrated codebase from webapp2's syntax to Flask's syntax, improving maintainability and scalability of the application/website.
- Leveraged the Google Datastore NDB Client Library to enable seamless connection between the App Engine Python application and Datastore.
- Addressed technical issues by debugging and resolving bugs within the application, contributing to enhanced functionality and user experience.
- Collaborated within a tech issue's group to troubleshoot and resolve issues promptly, ensuring smooth operation of the application.

PROJECTS

- ToDo list / Bucket list**
 - Made a single page application that changes the content over the website without losing and reloading the content itself.
 - This app is used to manage the tasks your way.
 - A shopping mall website where user can order the shoes and the ordered items append in the form of list with its details like quantity, size, price and item's name where user can also edit, delete and save the items in the list.
 - Framework:- HTML, CSS, JS, AJAX, jQuery, MongoDB, Flask, Python.
- Netflix Clone - Watch TV Shows & Movies Online**
 - Built Netflix Clone using HTML and CSS responsive website.
 - Link:- https://yuva-ind.github.io/Portfolio/projects/netflixClone_project
- Currency Converter App**
 - Built Currency converter app using HTML, CSS and JS responsive website.
 - Convert any country's currency into desired currency. Example:- Dollar to Euro, etc.
 - Currency data stored in a JSON format and fetched through API, rest depends on the type of the currency selected by the user.
